

Project overview

HURBE is a National Joint Project that aims, over 3 years (2018-2021), to develop the curricula in Higher Education Institutions in the field of Healthy URBan Environment in the Faculties of Architecture and Construction in Bosnia and Herzegovina (BiH). The project involves 6 Universities - Dzemal Bijedic University of Mostar; University of Sarajevo, University of Zenica; Sapienza University of Rome, Italy (coordinator); University of Zagreb, Faculty of Architecture, Croatia; University of Architecture, Civil Engineering and Geodesy, Bulgaria - and 5 Associate partners from Italy, Bulgaria, Croatia and BiH and it works on the modernisation of curriculum by developing new and innovative courses and installing new facilities. The motivation behind the project is the criticality of the topic on an international, European and national scale.

The target groups are HEI staff members that work on the preparation of future architects and engineers. The project builds a Consortium, which sets up a complete teaching Programme - creates academic courses and MOOC modules - for students, teachers and trainers, and installs laboratories that ensure a real sustainability after the project lifetime. This improves the teaching skills and integrates the healthy urban environment topic, through a project that puts the credit transfer - reform degree programmes - into practice and turns the European Higher Education Area into reality on the ground.
